PRODUCT PORTFOLIO:

- Maxwell offers a complete range of Slitting Cutters conforming to international standards-Rotary Metal Slitting Knives.
- Our Slitter cutters have the highest degree of hardness uniformity and the ideal metallurgical properties to slit any metal.
- Slitting Cutters are available in standard and extra precision tolerance grades with an option of lapping
- Upto 500mm diameter.
- FEATURES
 - High Speed Steel Blades are resistant to wear and tear in slitting cutting process
 - Dimensional accuracy is maintained at every step.
 - High speed operations at high temperature of metal slitting.
 - Sharp cutting edges for burr free cutting.

Our Slitter Cutters offer long-lasting cutting performance with optimal resistance to wear and corrosion. We can shape and hone our cutters precisely through a specialized multi-step process performed by programmable **Computer Numerical Control (CNC) machinery**. This puts us ahead of our competitors as we are able to move beyond the typical steels available in strip form.

Metal slitting knives suitable for slitting and cutting operations for non ferrous metal like Aluminum & Brass as well as ferrous metal materials like mild steel & stainless steels .

APPLICATIONS OF SLITTER CUTTERS:
